Teach procedure for sensor

○ **Note**
ⅰ Factory setting: **light switching,
time module not active**

Light/dark switching

Setting the switching behavior of the relay output

Teach level 1	**Press teach button** (2 to 7s) until both LEDs (green/yellow) **flash synchronously**. Release teach button – switchover is complete. The **yellow LED** then indicates the **current setting of the switching output** for **3s**: **ON = light switching =** output between **pin 4** and **pin 3**: **normally closed contact (NC)** output between **pin 4** and **pin 5**: **normally open contact (NO)** **OFF = dark switching =** output between **pin 4** and **pin 3**: **normally open contact (NO)** output between **pin 4** and **pin 5**: **normally closed contact (NC)**

2 … 7s

Activation/deactivation of the time module

Setting a dropout delay for the relay output

Teach level 2	**Press teach button** (7 to 12s) until both LEDs (green/yellow) **flash alternately**. Release teach button – activation/deactivation is complete. The **yellow LED** then indicates the **current setting of the dropout delay** for **3s**: **ON = time module not active = no dropout delay** for the relay **OFF = time module active = dropout delay** for the relay: **500ms** [1] 1) Additional models on request

7 … 12s

Dropout delay: if the object is no longer present, the output switches with a time delay.
