1 Phase electronic analogue power controller

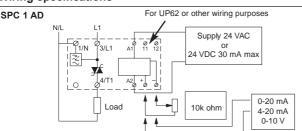

- Analogue controller for accurate process control
- Analogue controller for accurate process control
 Phase angle or burst firing control of heaters, lamps, trafos
 Rated operational voltage range: 120VAC, 230VAC, 480VAC
 Rated operational current up to 30A or 50A AC1
 Current Loop Control: 0-20mA, 4-20 mA
 Voltage Control: 0-10 VDC

- Manual Control: 10 kohm potentiometer
- Reverse action operation possible
- Built-In EMC Filter

1 Phase electronic analogue power controller

Wiring specifications

Short-circuit protection by fuses

Two type of short-circuit protection can be used: Short-circuit protection by fuses.

Short-circuit protection is divided into 2 levels Type 1 or Type 2

Co-ordination Type 1: Short-circuit protects the installation

Co-ordination Type 2: Short-circuit protects the installation and the semiconductors inside the motor controller

Short-circuit protection by fuses

Type 1: SPC 1 AD XX30 Protection max. 50A gL/gG
Type 1: SPC 1 AD XX50 Protection max. 50A gL/gG

Type 2: SPC 1 AD XX30 Protection max. Izt of the fuse 1800 A2S Type 2: SPC 1 AD XX50 Protection max. Izt of the fuse 1800 A2S

Fuses from e.g. Ferraz, Siba, Bussmann can be used as short-circuit protection Type 2

More information concerning Co-ordination Type 2 see page 37

EMC

This component meets the requirements of the product standard EN 60947-4-3 and is CE marked according to this standard.

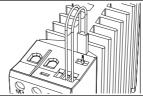

Mounting and cable wiring information

Mounting information see page 36 / Cable wiring see page 37

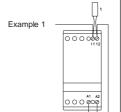

Application hints and general specifications

See page 32-33

Thermal overload protection (see also page 36)

Optional thermal overload protection is possible by inserting a thermostat in a slot on the right hand side of the electronic contactor. Type number UP62

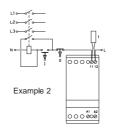

The thermostat can be connected in series with the control circuit of the electronic contactor.

When the temperature of the heatsink exceeds 90°C the electronic contactor will switch Off.

Note:

When the temperature has dropped approx. 30°C the electronic contactor will automatically be switched on again.

The thermostat is connected in series with the control circuit of the main contactor.

When the temperature of the heatsink exceeds 90°C the main contactor will switch Off.

A manual reset is necessary to restart this circuit.

Approval

ULc Std No. 508 (*No UL approval for AC 3 motor load)

Utilisation Categories (EN 60947-4-3)

AC - 51 Switching of resistive loads

AC - 55a Switching of electric discharge lamp controls

AC - 55b Switching of incandescent lamps

AC - 56a Switching of transformers
